11	6408 ZZ	SKF	20

To ensure effective sealing, plummer blocks are available with a variety of special sealing options and end covers. Benefits include a facility for easy mounting and dismantling of pre-assembled shafts.

Plummer block housings can be used with high-capacity spherical roller bearings or self-aligning ball bearings. They are manufactured from high-strength cast iron as standard but are also available in cast steel or spheroidal graphite cast iron. The housings have a re-lubrication facility and can be used with either oil or grease lubrication.

### Features

1. Split plummer block design allows for easy mounting and dismantling of pre-assembled shafts.
2. Sealing options - NSK offers a range of sealing options including oil seals, labyrinth seals, or heavy-duty taconite seals.
3. Case end covers are available.
4. Multi-relubrication points are provided to ensure relubrication of the bearing depending on orientation.
5. Housing are supplied with spacer rings in order to provide axial location. Those can be omitted for "free end" axial front.
